## **DETAILED ACTION**

### ***Specification***

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 5 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Limitation “according to any one of claims 1 through 4”, of claims 5 and 6, is misdescriptive because claim 3 has been cancelled.

In addition, limitation “switching a comparison signal inputted to the phase comparator” is misdescriptive because of the following reasons:

- It is unclear which signal “a comparison signal” refers to (i.e., fc or fr).
- The disclosure indicates “switching” involving the **output** of the phase detector, not the input thereof.

### ***Drawings***

4. Figures 7-9 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected

Art Unit: 2816

drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1, 2 and 4-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over the Masatoshi reference (Japanese Patent 10-107627).

Masatoshi discloses in figure 2 a PLL circuit comprising a phase detector 12, a loop filter 16, and a VCO 18 in successively loop-connected; operation stoppage detecting means 20 for detecting that PLL operation has stopped (explained in [0012] and [0013]), said detection being effected on the basis of an output signal from the VCO (see figure); and control means 14 for controlling the VCO such that an oscillating frequency of the voltage control oscillator is low [0041] as partially required by claims 1 and 2. Masatoshi does not disclose a frequency divider as required by claim. However, it is commonly known in the art to have a frequency divider coupled to the feedback signal line for closely matching the frequency of the feedback line to the reference line when a higher frequency output is required at the output of the VCO. (see Prior Art figure 7 and/or any cited references).

Art Unit: 2816

As to claim 4, [0031] discloses the claimed limitation wherein the high-level threshold of the Schmidt is seen as a predetermined value.

As to claims 5 and 6, as understood in view of 112 issue noted above, [0034] teaches control means 14 for switching to a value at which an oscillation frequency of the VCO decreases.

### *Conclusion*

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
